The high-risk factors persons

The Ministry of Health defined these high-risk factors:

1. The age above 65 years with some chronic diseases connected.
2. Chronic pulmonary disease *(includes also medium grave and grave asthma bronchiale)* with a long-standing regular pharmacological treatment.
3. Heart disease and/or vascular disease with a long-standing regular pharmacological treatment, for example hypertension.
4. Disorders of immunity, for example a) while steroid treatment, HIV etc..., b) while anti-tumour treatment, c) after the transplantation of substantial organs and/or bone marrow.
5. Serious obesity (BMI above 40 kg/m²).
6. Drug treatment of diabetes mellitus.
7. Chronic kidney disease with occasional or permanent need of assistance/substitution of the functioning (dialysis).
8. Liver disease (primary or secondary).

Belongs to the high-risk group of persons: a person who meets at least one of the items above, or a person that lives in the same house with a person that meets one of the items above.
